

Chris M.

“Inventing the future” by Marfé Ferguson Delano describes how Thomas Edison was a great inventor. He was a great inventor because got a reputation for one of the best electrical inventors in the country. He was a great inventor because he found a way to record sound so it could be listened to again. Edison also invented the lightbulb, which is very useful to us today.

Edison was a great inventor because he got a reputation for being one of the best electrical inventors in the country. “Edison had earned a reputation as one of the best electrical inventors in the country.” This shows that he was a great inventor because he got a reputation for being one of the best electrical inventors in the country.

Edison was a great inventor because he found a way to record sound. “There should be a way to record sound so it could be listened to later.” This shows that he was a great inventor because he was trying to invent something that could record sound so it could be listened to later. That was hard to do back then.

He was a great inventor because he invented the lightbulb. “When connected to an electric current, the bulb glowed steadily for more than 13 hours!” This shows how he was a great inventor because he invented a lightbulb that could last for more than 13 hours! Light Bulbs are very useful to us today. We use them mostly everywhere we go.

“Inventing the future” by Marfé Ferguson Delano describes how Thomas Edison was a great inventor. Edison was a great inventor because he got a reputation for one of the best electrical inventors in the country. He invented something that could record sound so it could be listened to later. He also invented the lightbulb, which we use frequently every day.
